MIDDLEBY RESIDENTIAL

State-of-the-art technology, informed by the knowledge and expertise of legendary chefs, top designers and engineers, is elevating cooking to an artform. Our iconic products are fresh yet timeless, new yet familiar. They offer the latest engineering innovations—induction stovetops, smart digital connectivity, exceptional ventilation, antimicrobial LEDs, app-delivered recipes—but they do something else, something more ineffable that comes from ages-old wisdom. They create a mood. They inspire colorful self-expression. They give chefs sacred places to create culinary masterpieces.

WE'RE PROUD TO BE
LEADING THE WAY

A LOOK BACK TO LOOK FORWARD

Middleby Residential's elite portfolio of indoor & outdoor brands now touches every corner of the globe. We've revolutionized, and continue to revolutionize, the home culinary arts because innovation is in our DNA.

Look first to Paris, 1908. Albert Dupuy introduces La Cornue, the world's first convection oven. The vaulted ceiling circulates heat around the oven, rather than trapping it above a flame, so food warms evenly and far faster and more efficiently than before. Gastronomy leaps forward again in 1922, when Nobel Prize-winning physicist Gustaf Galen, confined to his home after losing his sight, designs the AGA range, a cast-iron engineering marvel whose discrete heat zones allow people to cook by touch. Then, in 1987, comes another lightning strike: the premiere of the Viking range, which brings a professional-grade range to the home kitchen, ushering in an era of stainless-steel design.

At this year's Kitchen & Bath Industry Show in Las Vegas, we continue to take strides forward, unveiling some of our latest product innovations and giving our indoor & outdoor appliances an all-new wardrobe, featuring arresting color palettes and stunning metal finishes.

THE LYNX NAPOLI OUTDOOR OVEN™

ART + SCIENCE

STUNNING SELF-EXPRESSION

Color is the visual articulation of human emotion. Dark blues and deep greens evoke tradition and formality. Blacks and grays, the mark of luxury and sophistication. Reds and oranges spark fiery passion and warm energies. These connections are not arbitrary; they are forged deeply in our evolutionary history, shaped and enriched by places we've been and feelings we've shared.

This year Middleby is giving designers and homeowners a range of new color options to enliven and personalize the luxury kitchen. To meet a rising interest among homeowners to invite nature into their homes, we're showcasing fresh earth tones, organic tinctures, and biophilic materials that evoke warmth and reference the earth's geologic past. Eye-popping new color collections and designer-curated editions from both AGA & La Cornue are quickly becoming industry favorites.

LA CORNUE

OUR TRUE COLORS

THE LA CORNUE CORNUFÉ 90

NEXT LEVEL ICONIC

While the stainless-steel finish of the Viking range will always be in style, an exclusive designer 20-color finish palette, antique brass trims, and the sleek introduction of black glass doors showcase the versatility and artistic potential of metal and glass.

THE VIKING 5 SERIES 48" INDUCTION RANGE WITH BRUSHED BRASS AND PAINTED FASCIA

THE NEW FRONTIER

Multifunctional ovens with seamlessly articulated, zero-clearance facades and skin-tight reveals will take center stage at KBIS 2024. Engineered to fit snugly in the millwork of wall-mounted cabinets, with industry leading gap tolerances and systematic stackable chambers, Middleby's sleek Viking RVL is at the forefront of next-generation integration. The product has already been nominated for the annual Best of KBIS Style Statement Award.

In what *Popular Mechanics* called **“as big an advancement in cooking as the microwave oven”** the organization recognized Brava for the Best Smart Oven in the 2023 Gadget Awards. The brand's compact, countertop oven uses focused, synchronized pulses of light to deliver searing heat without burning or scorching food. Brava also provides an app that tracks cooking progress and delivers 8,000 recipes, with instructions from preparation to plating. A similar app will be available for the Viking RVL.

THE VIKING RVL

INTEGRATION

OUR FINGER ON THE PULSE OF INNOVATION

Engineers, architects & designers are not just looking to maximize square footage; they are striving to reduce energy use, improve safety, and cut carbon emissions and fumes. From radiant, electric-heat ovens and LED light arrays to ventilation hoods and induction stovetops, the kitchen has become the latest testing ground for performance optimization. Perhaps most notably, the architecture of the home kitchen is converging with digital technology, as smart sensors and IoT-enabled devices embedded in stunning shells are allowing chefs to prepare and refrigerate food as never before, with unprecedented precision and control.

THE INDUCTION SEDUCTION

Induction cooktops and ranges are having a moment, and for good reason. Not only do they improve air quality, but they are incredibly safe. Flameless surfaces can quickly heat a kettle to a simmer and reduce the temperature instantly when you lower the power. Plus, induction stovetops heat food precisely, two to three times more quickly than gas, while conserving energy, saving counter space, and simplifying cleaning by keeping glass surfaces cool so splatters don't cook on. Look to Middleby Residential brands Novy, CookTek, AGA, La Cornue and Viking to be unveiling induction-infused products at this year's show.

THE AGA MERCURY INDUCTION RANGE TOP

INDUCTION

A HEALTHIER, SMARTER HOME

Much ink has been spilled in recent years about efforts to improve the air quality of the home kitchen. Few brands understand the importance of peripheral extraction better than Novy, a 110-year-old Belgian-based manufacturer of cooker hoods and induction hobs that employs patented suction valves and filters to whisk away harmful fumes and odors and capture airborne fats. Built with a minimalist's eye for precision, the brand's products are blissfully quiet and designed so that you can control your ventilation easily using a smartphone, iPad or Android tablet.

As you'll see at this year's show, Middleby is leading the way when it comes to integrating the very latest innovation into our iconic brands. Our products are not only visually stunning and easy to use, but they are giving designers and homeowners the tech-enabled, environmentally conscious cooking options they crave.

THE NOVY PANORAMA 120

INNOVATION

OUR WORLD AWAITS YOU

The elite portfolio of 16 global Middleby Residential brands is more than a collection of manufacturing legends. It is a gathering of people, their achievements, their stories.

While we have held closely to a tradition of innovation and superior craftsmanship that has made Middleby Residential a recognized leader in home kitchen design, we have expanded our focus year after year. We've deepened our immersion in technology, leveraged years of commercial expertise, and continued to provide better support for clients. Today, we have seven distribution hubs across North America and over 3,500 dealer locations. We have a virtual Culinary Academy that pairs participants with top chefs who use our brands to learn how to prepare exquisite dishes. The backbone of Middleby Residential, however, is a friendly, accessible customer service team. Whether you have a question about order status, product specifications, or installation, we are there to help you.
